## **Abstract**

We discuss identification with tribes in Alaska.

How many people identify with only one of the four tribes in Alaska? In order to address this question, we use data from the Census of Population and Housing ([United States Department Of Commerce. Bureau Of The Census, 2004](#)). The four tribes coded within the Census of Population for Alaskan Natives are Alaskan Athabascan, Aleut, Eskimo, and Tlingit-Haida. We identify all respondents who specified only those tribal identities, without combining them with additional identifiers.

Table 1 shows the results.

Table 1: **Identifying with one of the four tribes**

Item	Number	Per cent
Not identified	554204.00	88.50
Identified with one of the four tribes	71,983.00	11.50
Total	626187.00	100.00
